

Bug Management Homework

Phase III Guidelines

Steps you can follow:

1. Grouping functionality areas and identifying areas you need to focus on for testing (such as creating ppt document with shapes, resize them, color them ...etc)
2. Think about state based testing for functionality testing/or sequence of actions user might take in using a certain functionality of the software.
3. Identify a possible bug, communicate (via email ...etc) with another student in the class ask him/her to verify the bug
4. If step 3rd is successful, write a bug report.
